DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of the invention of Group I (clms. 1-9) in the reply filed on June 23, 2008 is acknowledged.

Claims 10-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 23, 2008.

Information Disclosure Statement

The *Non-Patent Literature* information noted on the information disclosure statement filed March 3, 2006 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the *references are missing dates*. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With regard to claim 1, there is no antecedent basis for the recitation, "the log flow". What is the log flow? Further it is not clear how the amount of damaged logs "in said log flow" is measured or how the amount of bark remaining on the logs is maintained at said target value. How is the amount of damaged logs kept low? Additionally is the reduction of filling degree of the debarking drum an automatic operation or a manual operation, i.e. how is the filling degree of the logs fed to the debarking drum reduced in response to a measured increase in the amount of damaged logs? Clarification is required to facilitate a clear understanding of the claimed invention and proper application of the prior art.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-9 as best as can be understood is rejected under 35 U.S.C. 102(b) as being anticipated by Jonkka (2002/013943). With regard to claim 1 and 6-9, Jonkka discloses a method for optimizing the debarking of logs fed to a rotating debarking drum (1), wherein the improvement comprises that the amount of bark remaining on the logs in the log flow discharged (3) from the debarking drum and the amount of damaged logs in said log flow are measured (18,

19), and that at the same time as the amount of bark remaining on the logs is maintained at said target value, the amount of damaged logs is kept low, in such a way that the filling degree of logs fed to the debarking drum (1) is reduced in response to a measured increase in the amount of damage logs (fig. 4) wherein the measurement is a direct measurement, filling degree is reduced as damaged logs increase and wherein the fed logs are approximately the same size and of the same wood.

With regard to claims 2-5 as best as can be understood, Jonkka discloses wherein the amount of damaged logs is measured as an amount of shorter logs, narrower (i.e., varying diameter) logs, log deviations and via imaged formed ([para0018-0029]).
